

TRAINING EXAMPLE — NOT A REAL IEC 62304 DELIVERABLE

This project is a **training site, not a real medical device** under any regulatory definition. The device described in this document — “SentinelFlow 500” — is entirely **fictional**, invented for this course: nothing here is a genuine IEC 62304 deliverable, a real regulatory submission, or evidence of any real organisation’s compliance with anything. It illustrates the *kind* of document a real SaMD/SiMD project would produce. See the [document register](#) for the full explanation.

Clause: 8 — Software Configuration Management · **Register:** [Device Example Register](#)

Document ID: SOP-12 · **Device:** SentinelFlow 500 (fictional) · **Safety class:** C
Status: SOP — template (Procedure not yet written for SentinelFlow 500)

Fictional worked example. See [SOP-01](#) for the disclaimer that applies to this whole document set, and the [Device Example Register](#) for the SentinelFlow 500 device description and what “template” status means here.

1. Purpose

This SOP defines how SentinelFlow 500's software configuration items — source code, SOUP, tools, and documentation — are identified, controlled, and tracked through change, per Clause 8.

2. Scope

Applies to all configuration items of SentinelFlow 500's control software (Class C — see [SOP-01 §7.3](#)). Covers Clause 8 in full — every sub-clause applies to all three safety classes.

3. Responsibilities

ROLE	RESPONSIBILITY UNDER THIS SOP
Configuration Manager	Owns the identification scheme; maintains configuration status accounting
Software Development Lead	Requests changes to controlled items through the approved change process
QA/RA	Approves change requests to controlled configuration items

4. Definitions & Abbreviations

TERM	MEANING
Configuration item (SCI)	A uniquely identified software item, SOUP component, tool, or document under configuration control
Baseline	A defined, frozen set of configuration items at a specific point (e.g. at release), enabling exact reproduction

5. References

- IEC 62304:2006+AMD1:2015, Clause 8
- **SOP-02 — Software Development Plan:** the configuration management planning (§5.1.9–5.1.11) this SOP fulfils
- **SOP-09 — Software Release:** the release archive (§5.8.7) built from this SOP's baselines

6. What the standard requires

REF	TITLE	APPLIES AT CLASS C	WHAT MUST BE PRODUCED
8.1.1	Establish means to identify configuration items	Yes	Scheme for the unique identification of configuration items and their versions

REF	TITLE	APPLIES AT CLASS C	WHAT MUST BE PRODUCED
8.1.2	Identify SOUP	Yes	For each SOUP configuration item: its title, manufacturer and unique SOUP designator
8.1.3	Identify system configuration documentation	Yes	The set of configuration items and their versions comprising the software system configuration, documented
8.2.1	Approve change requests	Yes	An approved change request for every change to a controlled configuration item
8.2.2	Implement changes	Yes	(No standard-named output.)
8.2.3	Verify changes	Yes	(No standard-named output.)
8.2.4	Provide means for traceability of change	Yes	Records of the relationships and dependencies between change request, relevant problem report, and approval of the change request
8.3	Configuration status accounting	Yes	Retrievable records of the history of controlled configuration items, including the system configuration

(Quoted directly from `applicability.json` , identical in content to the self-referential set's [12.](#))

7. Procedure

Not yet written for SentinelFlow 500 — see the [Device Example Register](#) for what "template" status means. Once complete, this section would give SentinelFlow 500's actual identification scheme, its SOUP register, and its change-control workflow.

8.1.1–8.1.3 — Identification scheme, SOUP register, system configuration documentation

[Template.]

8.2.1–8.2.4 — Change approval, implementation, verification, traceability

[Template.]

8.3 — Configuration status accounting

[Template.]

8. Records

RECORD	PRODUCED BY	RETAINED IN
Configuration item register (incl. SOUP)	Configuration Manager	Configuration management system
Change request records	Configuration Manager	Configuration management system
Baseline records, per release	Configuration Manager	Configuration management system

9. Revision History

Illustrative only — SentinelFlow 500 has no real revision history.

VERSION	STATUS	DESCRIPTION
1.0	Template	Structure and requirements table complete; Procedure section pending
